

# ***Advantages of a SoftCell Portable Water Softener***

## **WHAT IS SOFTCELL**

SoftCell is a high capacity commercial portable water/filter softener for Marine, RV, Seasonal Homes, and other unique applications. The SoftCell softener combines the benefits of a conventional water softener with the portability demanded by our mobile society. Whether you own a boat, recreational vehicle, cabin or just need soft water to wash your car or plane from a water hose, the SoftCell softener will provide ample amounts of conditioned water.

## **HARD WATER**

The words “hard water” describes water that contain calcium and magnesium, the hardness minerals. Rain water begins as a soft water, free of minerals. As rain water passes over and through the earth, flowing into lakes, rivers, streams, and the ground, it absorbs the hardness minerals. While these minerals aren't harmful to your health, they do affect the properties of water and it's effectiveness for washing and cleaning.

## **BENEFITS OF SOFT WATER**

Soft water turns tough cleaning jobs into easy work, it also saves money and time. You need less soap to get suds. You can say good-bye to annoying water scaling and soap scum as well as stubborn spots left on gelcoat, glass, sinks, and showers. Your piping and appliances remain stain and clog-free, requiring less maintenance and repairs.

## **BENEFITS OF SOFTCELL**

At an affordable price, the SoftCell softener provides a simple solution to the problems associated with hard water used in recreational applications. Simply installed between the hard water source supply and your boat or RV, the unit requires no electrical power and has no moving parts to repair or replace. You can fill your potable water holding tanks, or use a hose directly from the softener to wash and rinse without the stains and spots from rusty and hard water. SoftCell's portability allows you to take the benefits of your home water softener with you as you travel or cruise from place to place
